01 / THE THESIS

# Security for software built with AI.

Find bugs.
Prove correctness.

01 / AI-LED RED-TEAMING

02 / FORMAL VERIFICATION

02 / THE FOUNDING INSIGHT

# Two sides of software security.

A lesson from my PhD: we need both.

01 / RED-TEAMING

## Find Bugs ∃

Uncover whether vulnerabilities exist.

02 / FORMAL VERIFICATION

## Prove Correctness ∀

Prove the security rules hold for all inputs.

# One workspace.
# Both sides of web security.

01 / AI-LED RED-TEAMING

## AI tests. You oversee.

AI agent
**CLI** ↔ Human **Dashboard**

Test existing web apps in any language.

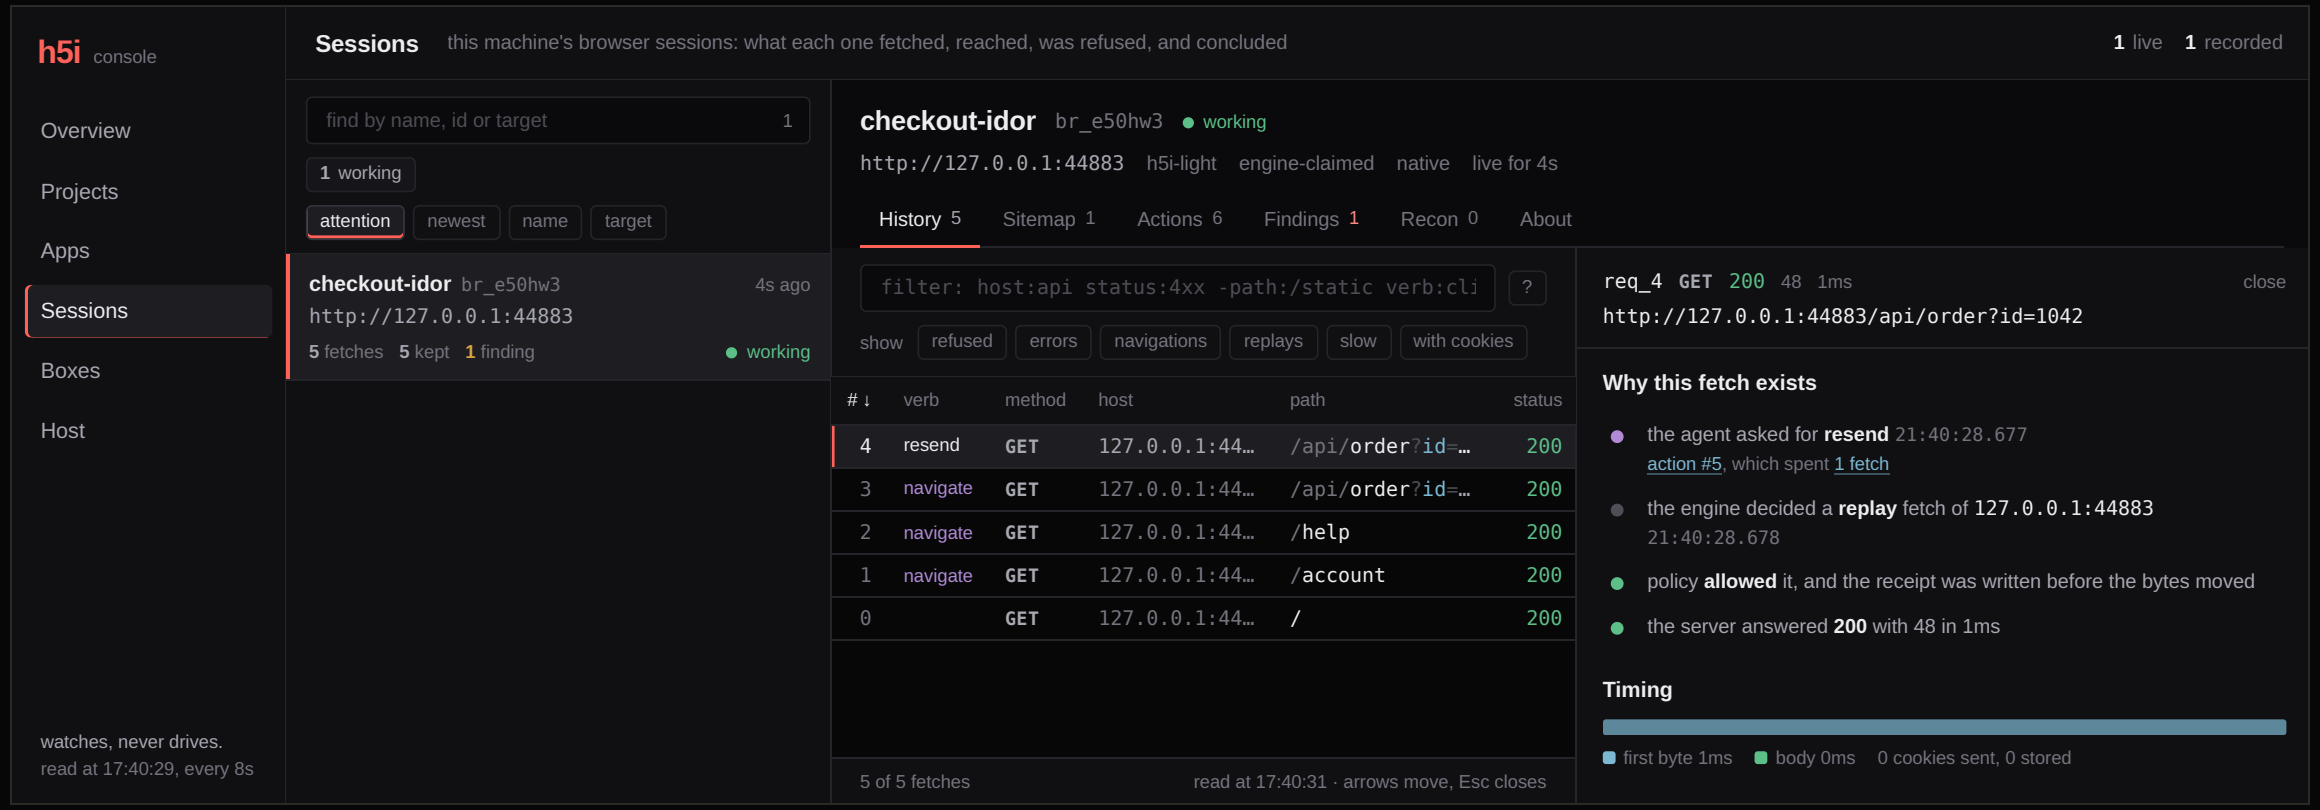

02 / FORMAL VERIFICATION

## A Rust-based Web Framework

**Rust** → **Lean 4**

Prove application correctness in Lean 4.

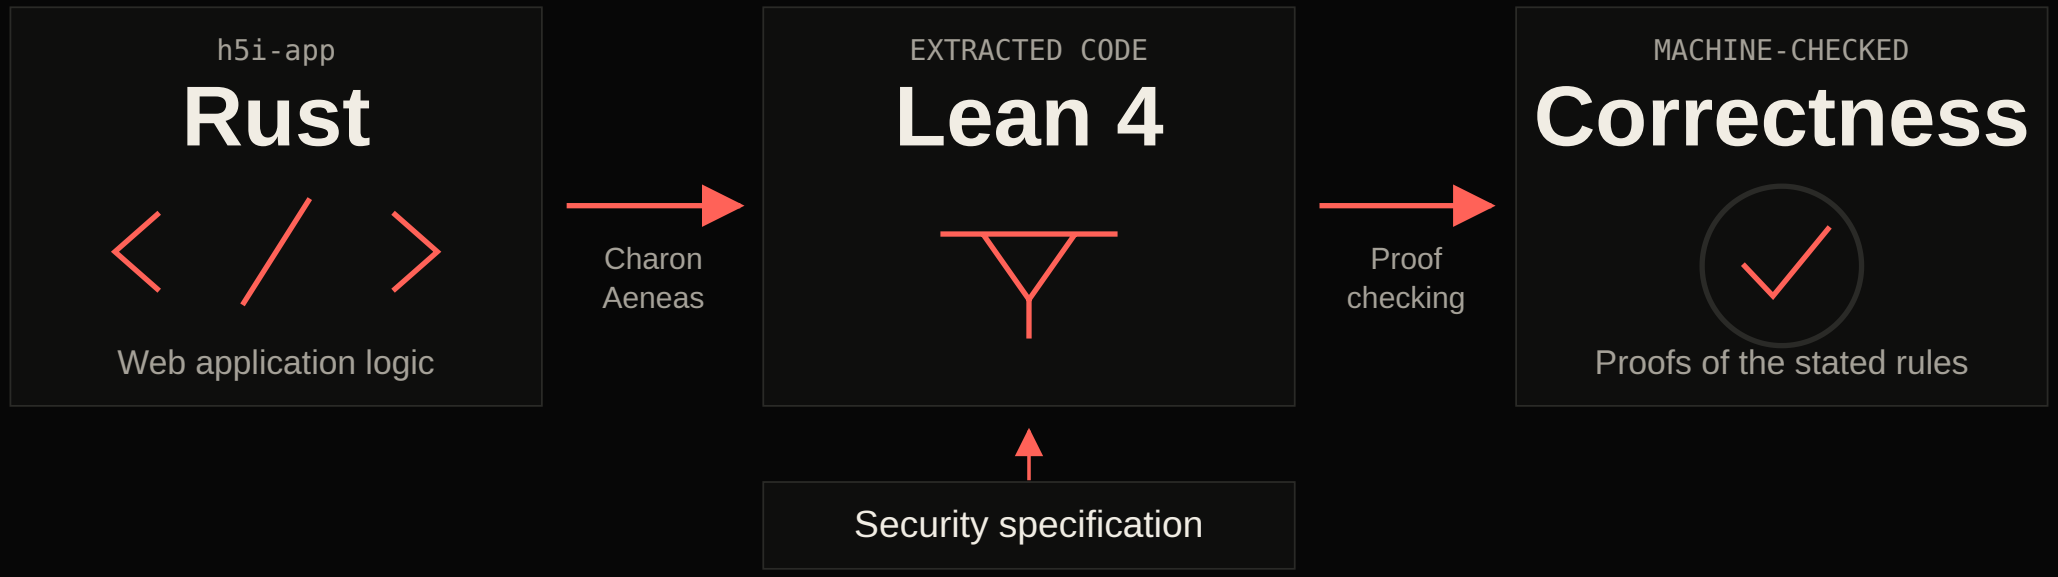

# AI operates. You oversee.

AI-friendly CLI ↔ Human dashboard

Actions · Traffic · Findings

# Prove Correctness. With Lean 4.

Example: only an author or moderator can delete a post.

See the proof ↗

# Test the app.
# Prove the logic.

AI-LED RED-TEAMING

## Running app

Vulnerabilities found

FORMAL VERIFICATION

## Application logic

Security rules proven

Software security

07 / EARLY TRACTION

# Open-source traction
